

Recruiter emails keep the shortlist current.

Every morning, Argus reads the recruiting emails in its scope and updates Elios Insights. In this example, Chris Chomic recommended a candidate by email. Argus curated the candidate to the talent request and recorded the reason. Chris did not have to enter the same update in Insights.

5,219

Emails processed in the supplied 30-day Elios Agent Dashboard snapshot.

362

Successful write-tool calls in the same 30 days. Multiple actions can affect one record.

\$0.02

Reported LLM cost per write action. Token cost only; rounded by the dashboard.

▼ Shortlist 1

Avery Lindqvist

Elios Curated · Microsoft 365 training

Reason for curation:

Curated Avery for the Instructional Designer role based on Copilot course design and Microsoft 365 training experience, from Chris Chomic's Outlook email.

Curated by  Agent Argus

Based on a recorded recruiting workflow. Chris Chomic is the recruiter; candidate, company, and role identifiers are fictional. Email copy is an illustrative paraphrase, not the original message.

Morning run complete → Candidate curated in Insights

Guardrails by design

The recruiter makes the call

The recommendation comes from the recruiter's email. Argus carries that decision into the talent request.

No duplicate data entry

Chris works in Outlook. The next morning's run updates the shortlist in Insights without asking him to retype it.

Attribution stays visible

The curation is attributed to Agent Argus, with the source email and the reason recorded on the match.

Give us one problem. Let us prove it.

Ask us to run this against your workflow, or tell us the process you want automated.
