

Turn resumes into data your systems and agents can use.

Process PDF and Word resumes into structured candidate records and agent-ready Markdown. Already running in Elios Insights for incoming files and existing resume libraries.

98.8%

Field accuracy: human-graded

~1.5¢

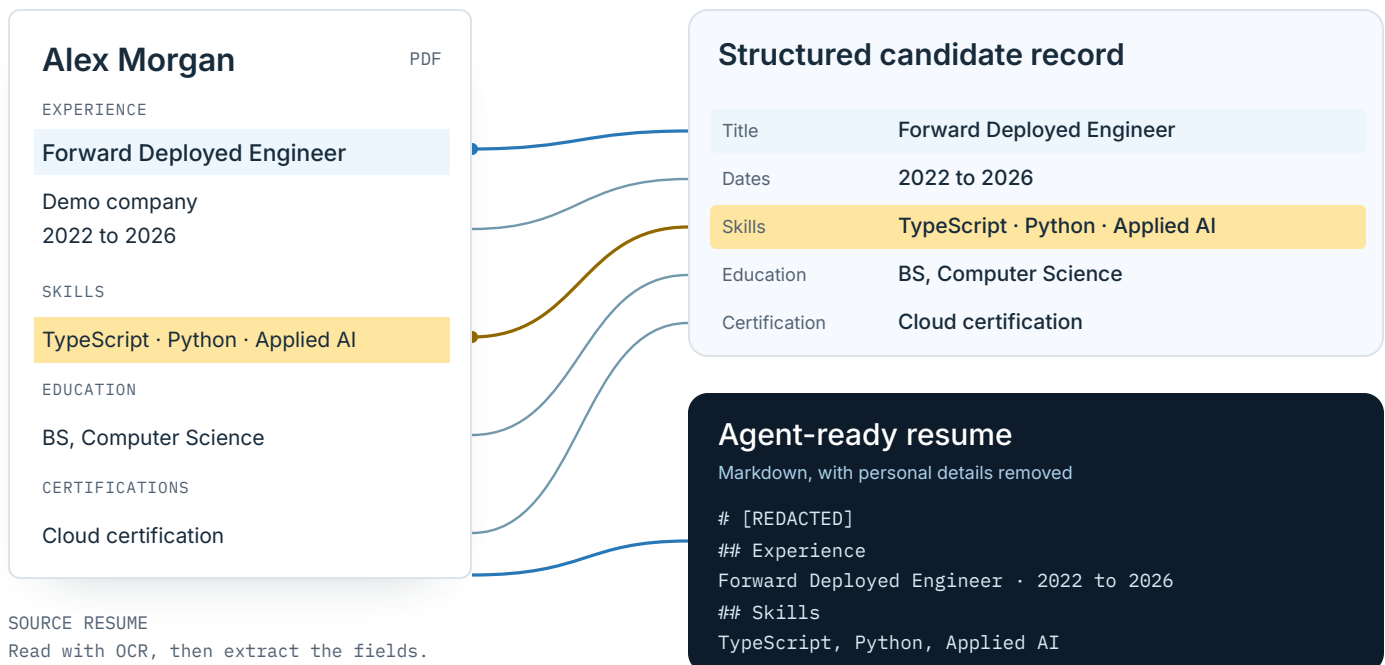

OCR, AI and compute cost per resume.

PDF + Word

Accepts PDF, DOCX and legacy DOC.
Built for background processing.

Accuracy is measured on a human-graded test set. Approximate processing cost excludes implementation and ongoing support.
Applicant scoring is separate.

From the document to a usable candidate record.

Illustrative extraction from a fictional resume. Selected fields shown; no real candidate or employer data.

Fields your team uses

Extract work history, skills, education, credentials, licenses and location where present.

Context for your agents

Keep readable Markdown alongside structured fields, with a personal-details-removed copy.

Background processing

Process incoming files and resume libraries with retries and duplicate-file detection.

Give us one problem. Let us prove it.

Bring the resume workflow you want to improve.
